

Where Science Goes to Become Health: NCATS Mission, Vision, & Goals

Joni L. Rutter, PhD

Director

National Center for Advancing Translational Sciences (NCATS)

Research!America Alliance Discussion
October 15, 2024

The Public Health Challenge

10,000

Diseases

and only

5%

Have
Treatments
or Cures

Time from early development to the medicine cabinet takes 10-15 years.

9

out of

10

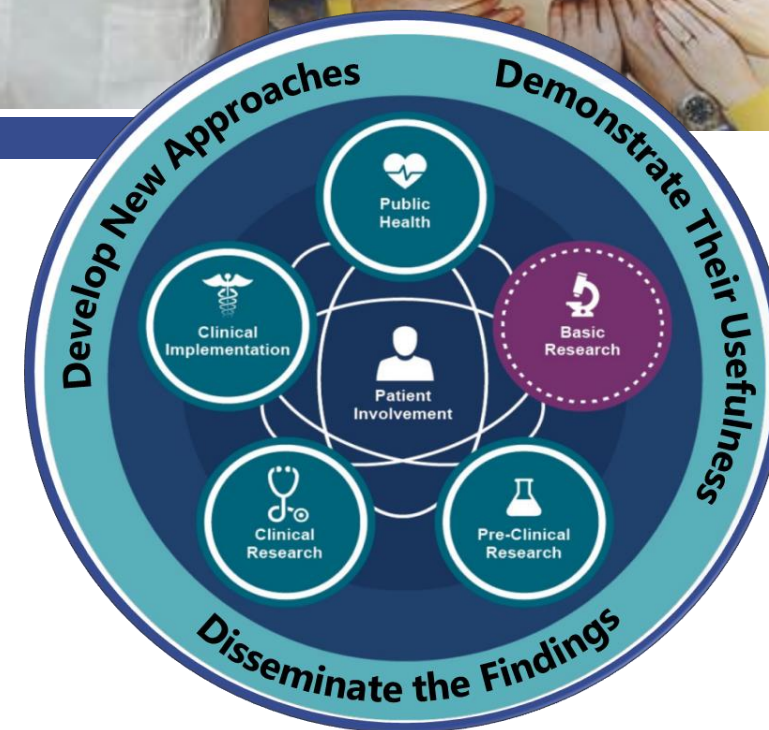

Promising therapeutic candidates that enter clinical trials fail.

NCATS' Mission

Turn research observations into health solutions through translational science

NCATS Vision: Three Audacious Goals

More Treatments

**Five-Fold Increase
in Number of Diseases
with Treatments**

All People

**Dramatically Increase
Inclusivity Across Every
Area We Support**

More Quickly

**Enable Diagnostics and
Therapeutics to Reach
People Twice as Fast**

NCATS Strategic Plan for 2025-2030

Turning Vision into Action

 **1,700+**
unique
comments

 **1,150+**
individuals
engaged

 **44+**
formal
meetings

 **70+**
written
responses

Read the Strategic
Plan here

Goal 1

Advance
Development
of and Access to
More Treatments,
Particularly for
Diseases With
Unmet Needs

Goal 2

Empower
Everyone to
Contribute to and
Benefit From
Translational
Science

Goal 3

Accelerate
Translational
Science by
Breaking Barriers
and Boosting
Efficiency

Goal 4

Leverage Crosscutting Strategies to Enhance Translational Science

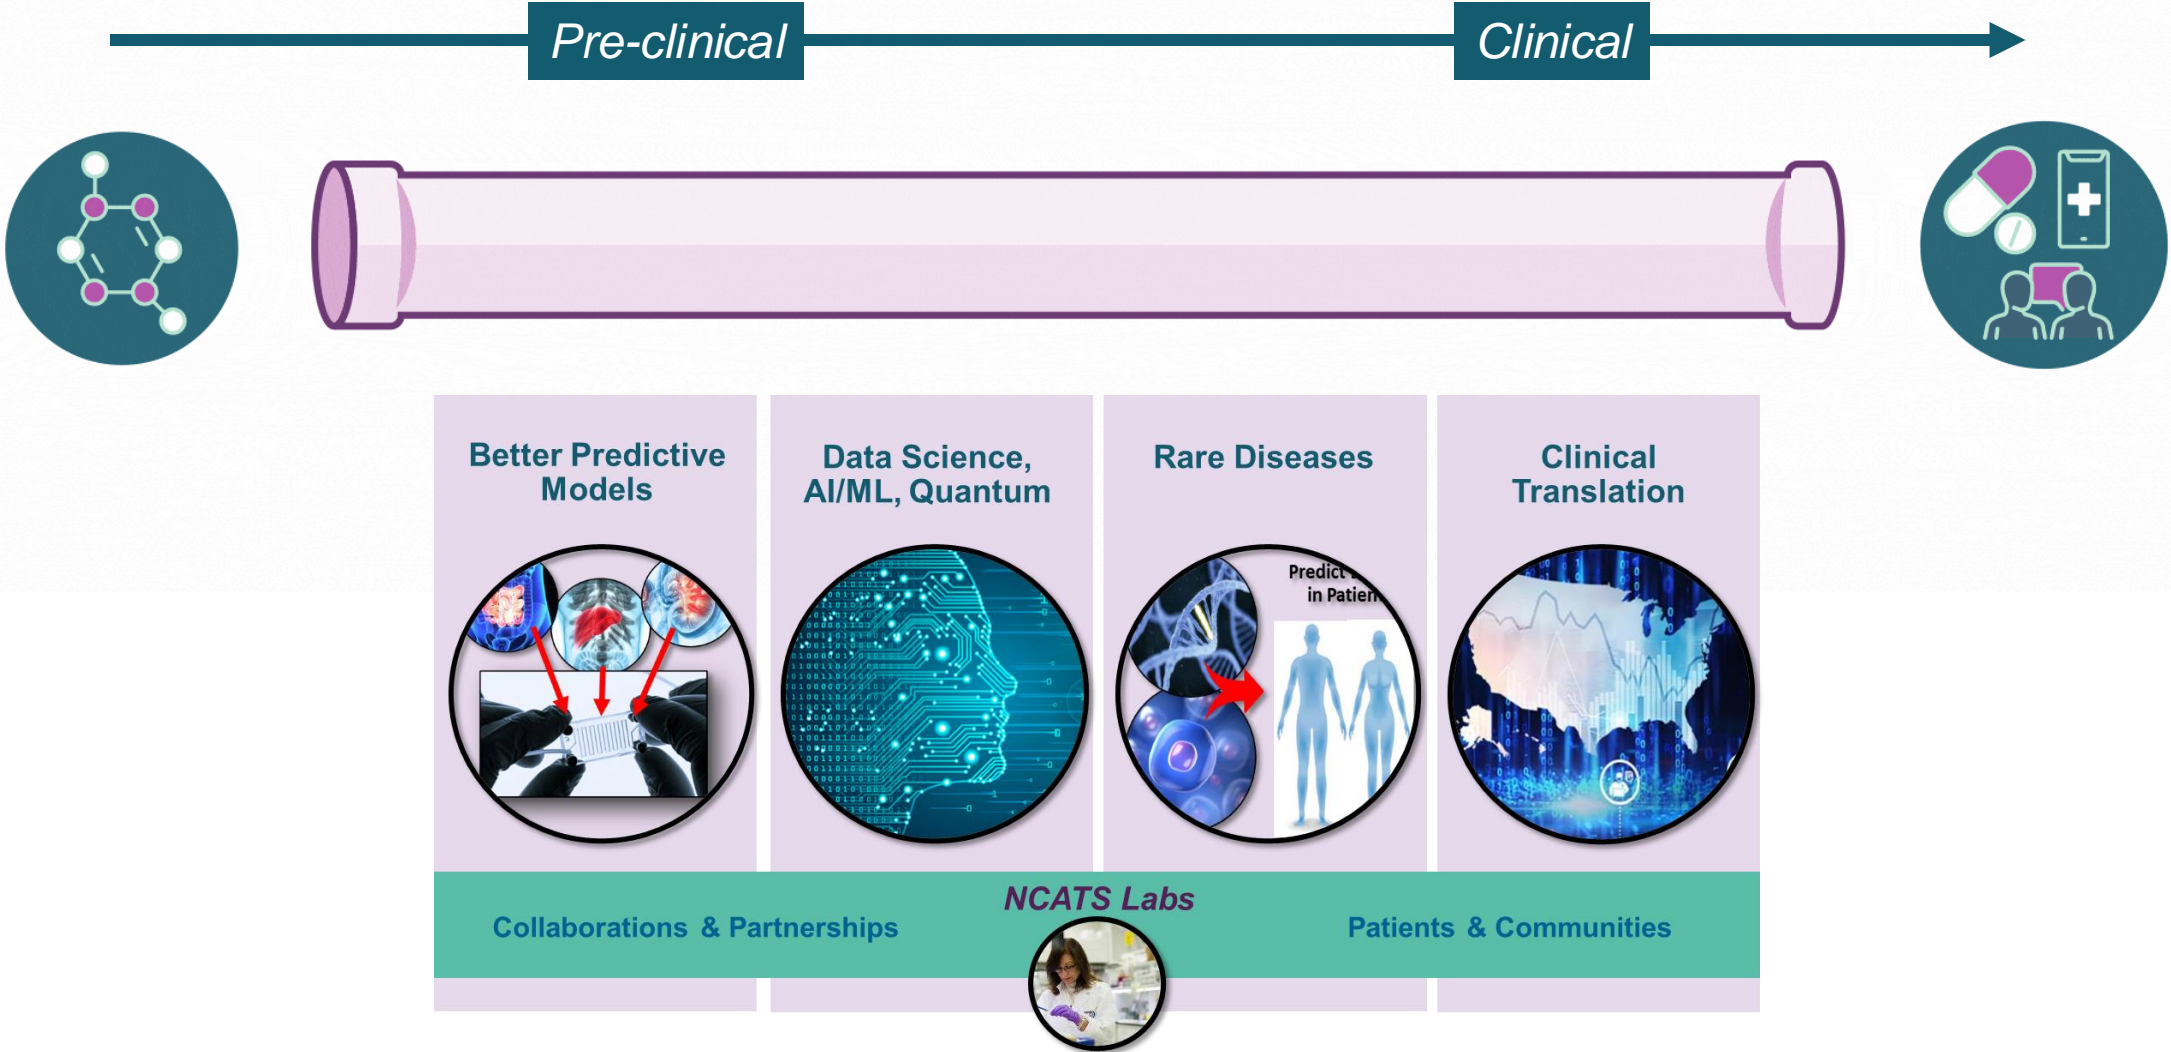

Goal 5

Champion Effective Stewardship of Translational Science Through
Transparency, Integrity, Accountability, and Social Responsibility

NCATS is Re-engineering the Translational Pipeline

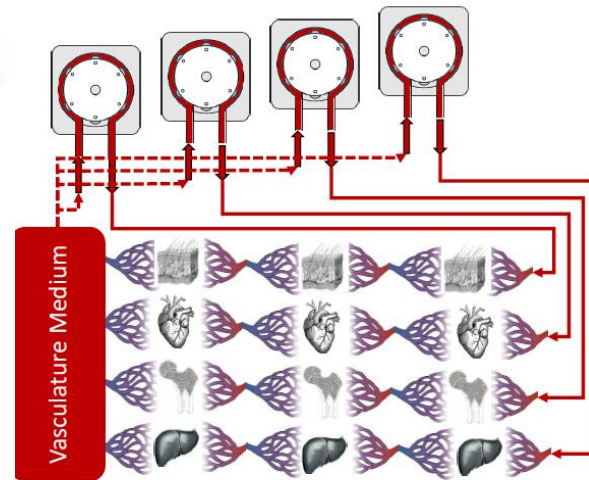

NCATS is advancing translational science by addressing long-standing scientific and operational bottlenecks in the translational pipeline so that new treatments reach people faster.

Better Predictive Models

3D Bioprinted Skin Tissue

Multi-Organ Chip

Precision Medicine You-On-A-Chip

- Identify & test biomarkers
- Reduce trial risk
- Hone patient selection
- Explain variable treatment response

Complement Animal Research In Experimentation (Complement-ARIE)

Speeding the development, standardization, validation, and use of human-based NAMs

- Technology development projects/centers
- Data & NAM resource coordinating center
- Validation network for regulatory implementation
- Community engagement and training
- Strategic engagement

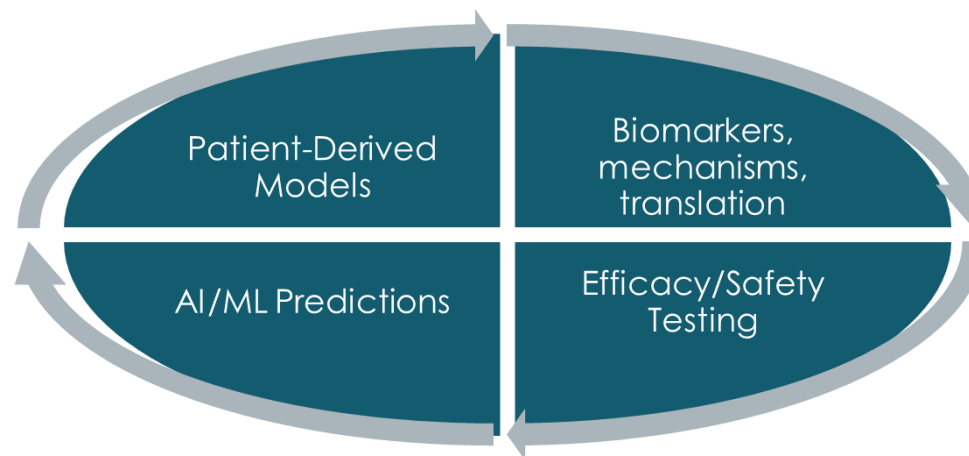

i3D-RARE WORKSHOP

THINK OF TOMORROW, TODAY

A Precision Medicine Platform of iPSC-derived 3D Cellular Models to Accelerate Therapeutic Development for Rare Diseases

i3D-RARE: A precision medicine platform of stem cell-derived 3D cellular models to accelerate the development of therapeutics for rare diseases

MODEL/DATA GENERATION

What drugs may treat...

SHINE Syndrome

TRANSLATOR

Funded by NIH's National Center for Advancing Translational Sciences

Turning data into knowledge graphs to get insights into how drugs might relate to diseases

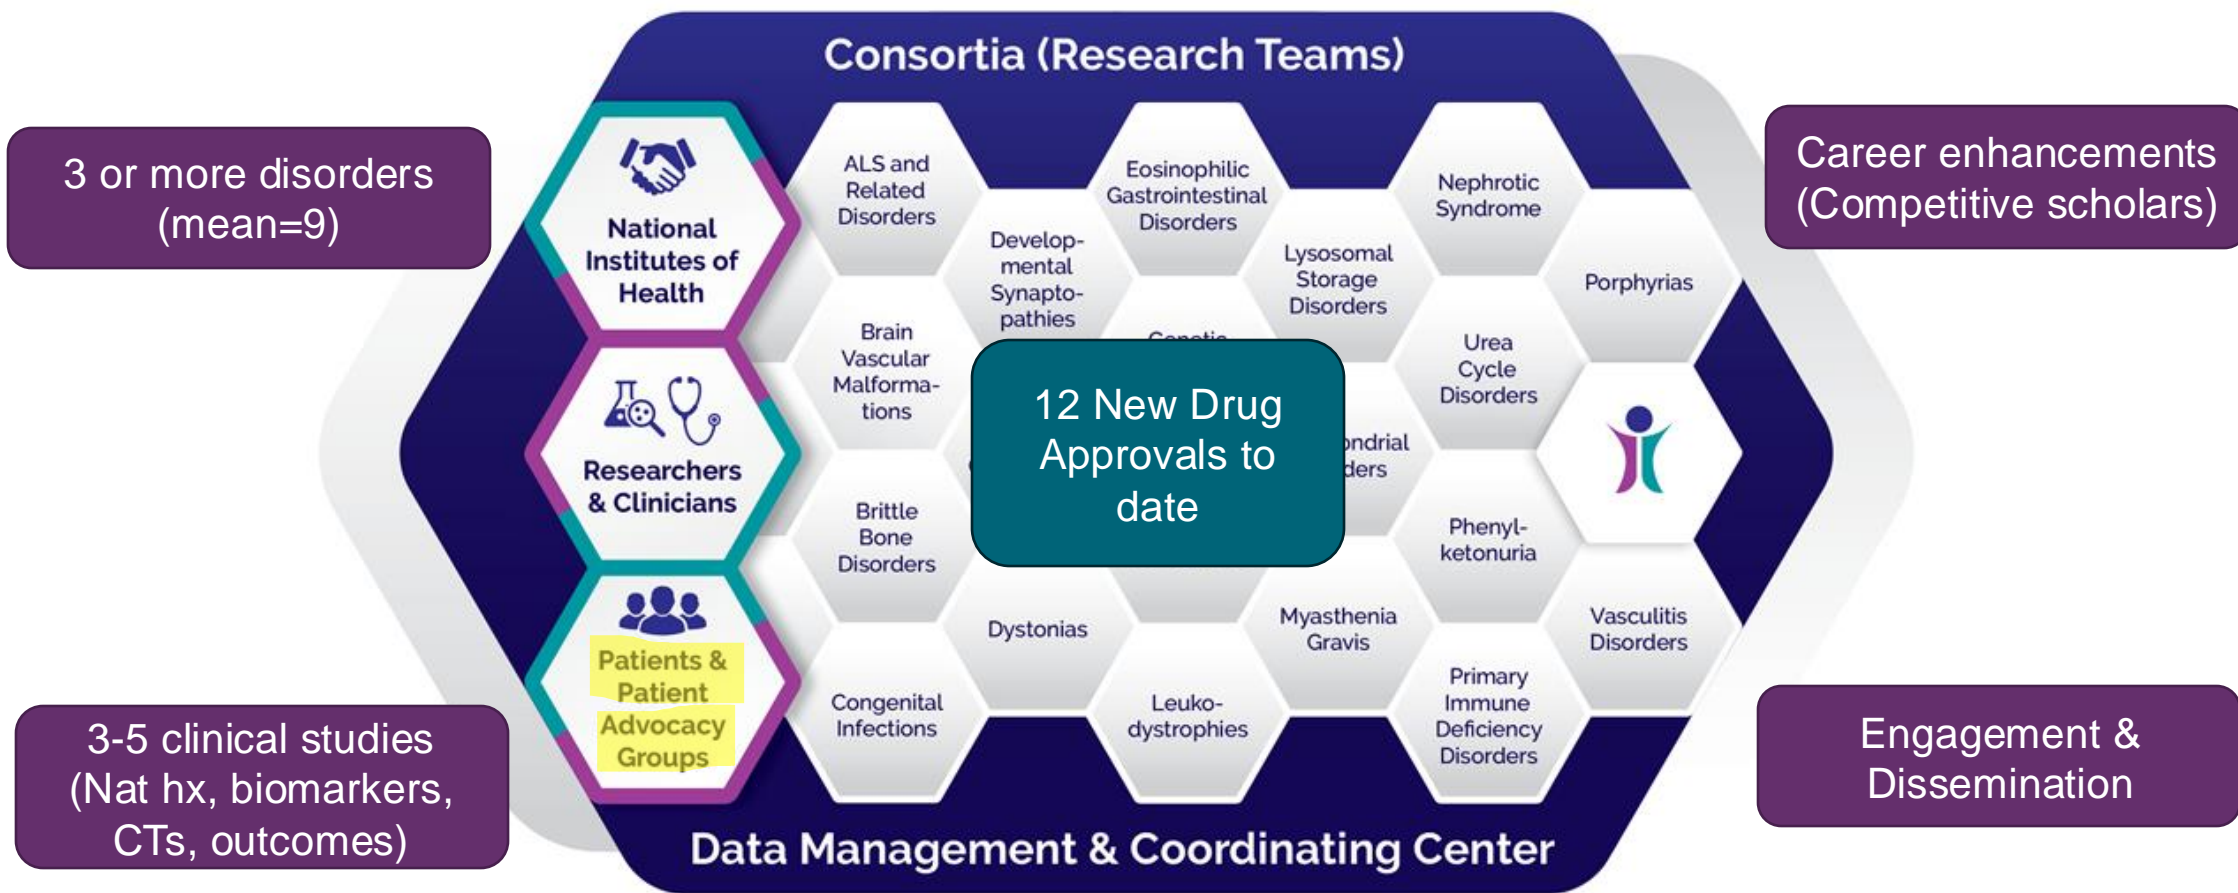

<https://ui.transltr.io/demo>

Use Case – SHINE Syndrome

- “What drugs/chemicals may up/downregulate my gene of interest?”
- SHINE syndrome:
 - Sleep Disturbances
 - Hypotonia
 - Intellectual Disabilities
 - Neurological Disorders (including motor issues)
 - Epilepsy
- Gene: *DLG4* (discs large MAGUK scaffold protein 4); predicted impact of variants: LOF, haploinsufficiency
- Translator result: Guanfacine may increase *DLG4*
- Five months post-treatment
- Translator can show value for research of all stages – early preclinical to clinical

A network of 20 research teams collaborating to achieve faster diagnosis and better treatments for patients with rare diseases

National Center for Advancing Translational Sciences

Gene-Based Therapies for Rare Diseases

Development

Clinical Trials

1) Somatic Cell Gene Editing (SCGE)

- NIH Common Fund Program
- Moving to clinical studies for second phase
- Toolkit – data on performance of delivery technologies

2) Accelerated Medicines Program® – Bespoke Gene Therapy Consortium (BGTC)

- Enhancing vector manufacturing
- Enhancing gene expression
- Regulatory playbook

3) Platform Vector Gene Therapy

- Single AAV vector as a platform for multiple therapeutic genes
- Testing ability to increase efficiency to clinical trial start-up

Accelerating Medicines Partnership®

Bespoke Gene Therapy Consortium (BGTC)

<https://fnih.org/BGTC>

Mission: Streamlining regulatory frameworks to accelerate gene therapies for rare

Gene Therapy and Manufacturing Pairs Selected for Clinical Trials	Rare Pediatric Disease Designation	Orphan Drug Designation
Adeno-Associated Virus 9 (AAV9-hPCCB) for propionic acidemia	✓	✓
Adeno-Associated Virus 9 (AAV9-SUMF1) for multiple sulfatase deficiency	✓	✓
Adeno-Associated Virus Nephrocystin 5 (AAV-NPHP5) for NPHPR mutation-associated retinal dystrophy	✓	✓
Adeno-Associated Virus 5 (AAV5-CNGB1) for autosomal recessive retinitis pigmentosa due to CNGB1 mutation	✓	✓
Adeno-Associated Virus 8 (AAV8-hGALNS) for mucopolysaccharidosis IVA (Morquio A syndrome)	✓	✓
Adeno-Associated Virus 8 (AAV8-hSLC4A11) for congenital hereditary endothelial dystrophy	✓	✓

NCATS Labs: A Record of Clinical Success

>50
IND applications

3

New drug approvals

Chronic yeast infections
(approved by FDA)

Upstaza™
(eladocagene exuparvovec)

AADC deficiency
(approved by EMA)

aGamree®
(vamorolone) oral suspension
40mg/mL

Duchenne muscular dystrophy
(approved by FDA and EMA)

CTSA Program: Premier National Network Speeds Health Solutions

#CTSAProgram

Develop, demonstrate, and disseminate innovations that turn science into health faster

Promote impactful partnerships and collaborations

Address health disparities

Provide a national resource for the rapid response to urgent public health needs

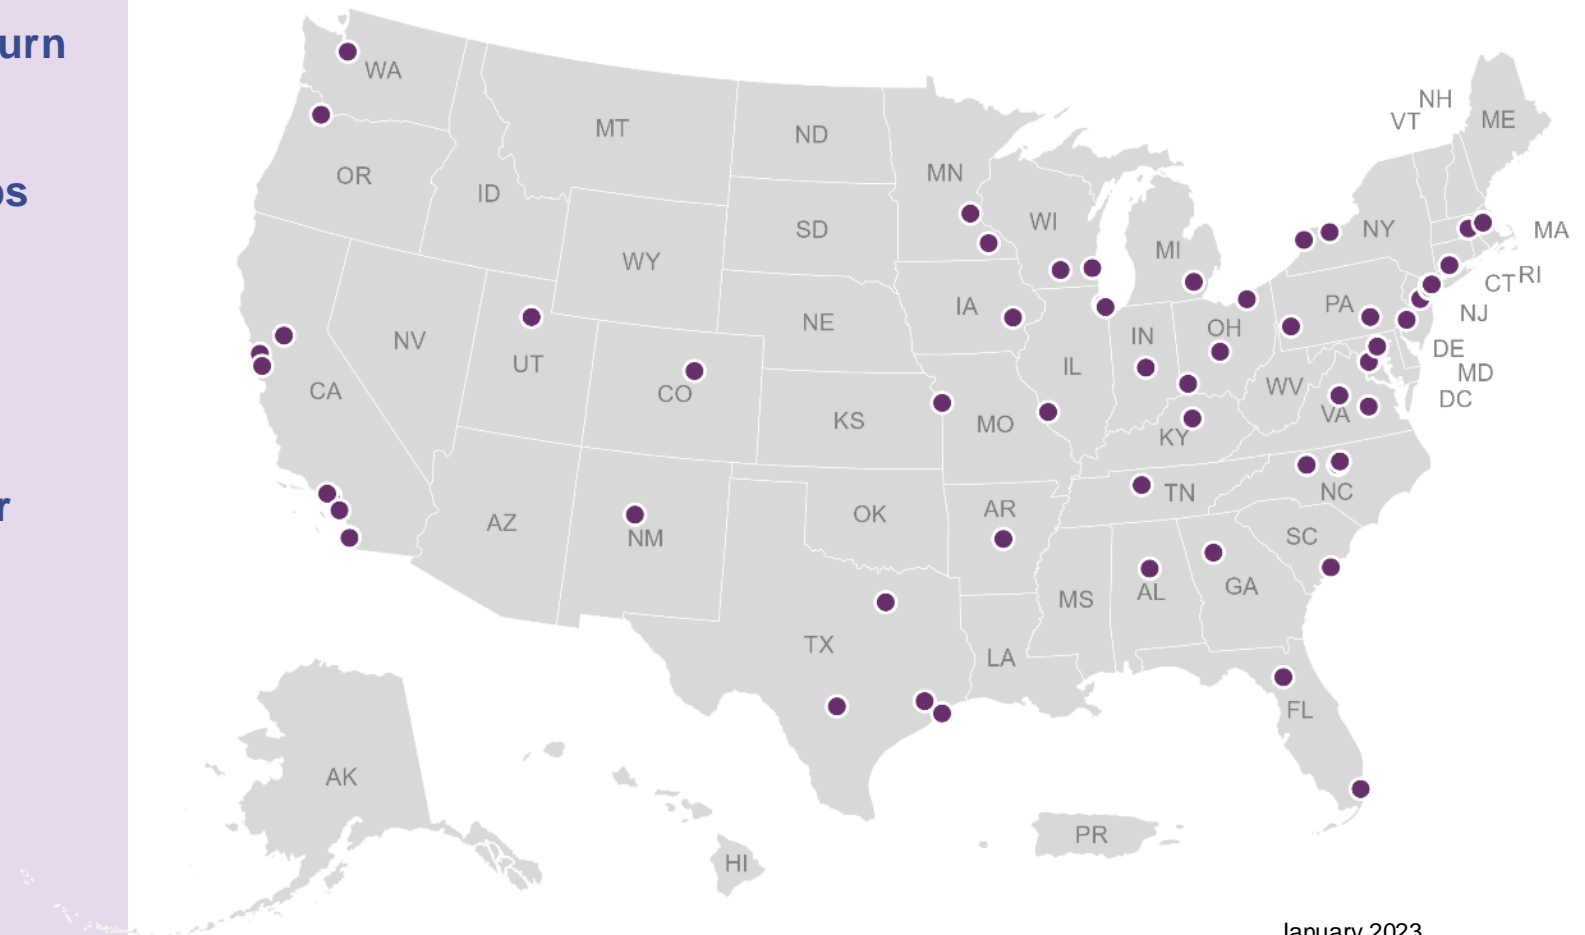

Promote training and career support

Nurture the field of translational science

Clinical and Translational Science Awards Primary Institutions

January 2023

...Local strengths enable nimble, rapid, and robust responses to national public health challenges

Support Pediatric Research Outreach Utilization Telehealth

Telehealth and Virtual Care Challenges (pre-COVID)

- Variation in services provided via telehealth and virtual care
- Lack of adequate research and reliable, generalizable data to support practices, reimbursement, and provider adoption
- Different focus for different stakeholders: clinicians, payers, patient urgent cares, primary care

Researchers Shed Light on a Rare Genetic Disease in Children

Findings could lead to better treatments for primary ciliary dyskinesia

Mobile health vehicles offer health resources, vaccine education and outreach opportunities through the Our Community, Our Health programs.

trial to test immune modulators for treatment of COVID-19

COVID-19 can trigger an immune response that causes inflammation that can lead to life-threatening conditions. ACTIV-1 will determine if regulating the immune response with immune modulators can reduce the need for ventilators and shorten hospital stays.

Distribution of NCATS CTSA Primary Sites Associated with Clinical Networks*

N3C-Clinical Pilot: Tenant Infrastructure and Clinical Research Enclaves

Common Infrastructure

-  Governance
-  Common data format (OMOP)
-  Data Cleaning & Harmonization
-  Data Quality
-  Data Lineage
-  Granular/Purpose-Based Access Controls
-  De-identification
-  AI/ML Environment
-  Code Workbooks
-  Analytical Tools

Clinical Research Enclave Pilots and Future Potential

Collaborative analytics within the N3C common infrastructure

Adding top 8-10 highest burden disease areas

Vision for future state

Research Datasets

-  CMS Data
-  N3C Clinical Data
-  SDOH Data
-  Viral Variant
-  Mortality Data
-  Vaccine data
-  *Imaging MIDRC
-  SEER, SRTR

N3C Answers Public Health Questions

N3C helped the White House COVID-19 Response Team assess national use of Paxlovid.

Broader uptake of key COVID-19 drug could have saved more lives.

N3C data predicted that if 50% of people eligible for Paxlovid had taken the drug, it would have saved **51,000 lives and spared 168,000 patients from hospital admissions.**

Reinfection

Long COVID diagnoses appear to occur more often and closer to the time of reinfection.

Cancer Patients

While cancer patients with COVID had a higher risk of death, their race and recent cancer treatments did not significantly increase that risk.

Diabetes

For those with diabetes, blood sugar levels above the ideal amount increased their odds of hospitalization, ventilation and death from COVID infection.

Vaccination

People who were vaccinated before COVID infection had a reduced risk of long COVID.

Transplant Recipients

Impact of COVID infection varied by organ transplant type, putting lung recipients at high risk and liver recipients at lower risk.

COPD

COVID infection was twice as likely to be fatal for people with a common chronic inflammatory lung disease called COPD.

Health Disparities

Long COVID affects Black and Hispanic Americans more than white people, but these groups are less likely to be diagnosed.

Living with HIV

People with HIV had higher odds of dying from COVID but lower odds of mild or moderate COVID infection than those without HIV.

MIS-C

Kids who were male, Black/African American, or obese were more likely to develop dangerous organ inflammation called MIS-C after COVID infection.

Metformin, COVID-19, and Long COVID

COVID-OUT Clinical Trial Results

Suggesting that Acute Metformin Treatment Prevents Long COVID

<https://www.medrxiv.org/content/10.1101/2022.12.21.22283753v1>

ACTIV-6

COVID-19 and Long COVID to be Studied through Participant Follow-up Questions and N3C Analyses

- Primary endpoint will continue to be Time To Recovery from Acute Symptoms
- ACTIV-6 Metformin participants will be followed for up to six months
- Follow-up questions for ACTIV-6 metformin participants include:
 - Have you been told by a medical provider that you have long COVID?
 - Long COVID-specific symptom questions, i.e. What level of fatigue (being tired) have you experienced?

ACTIV-6 and Long COVID

Enhancing Public Health Impact Through Associated Analyses of Real World Data

METFORMIN

ACTIV-6

Participant-Reported Outcomes from 3000 participants for 6 months after metformin treatment (opened September 5; enrolled 1485 participants)

N3C PHASTR

Electronic Health Record Data from 110,000 outpatients who started taking metformin after a positive COVID-19 test

Strategic Planning → Strategic DOING

NCATS communities have a critical role in helping us achieve our audacious goals and address emerging national research priorities.

Expanding clinical research capacity

- Jumpstart NIH director's visions
- Leverage existing networks
- Engage in new clinical trial modalities

Using RWD and clinical Informatics to improve public health

- AI/ML
- Platform technology
- Predictive models

Training the next generation of the research workforce

- Inclusivity
- AIM-AHEAD
- Career development

Other things we're watching

- Women's health
- Quantum science

Communities Advancing Research
Equity for Health

CARE for Health™

Co-Chairs

Connecting Research to Clinical Care
